DDR4 memory modules are commonly applied in PCs, in which fast data transfer, high capacity as well as low power consumption is required. In order to ensure the highest quality of K-MEMORY memory modules, only the selected components are used. Thanks to the multilevel quality control as well as meticulous tests of each produced module, the user receives the products of exceptional reliability and the highest quality.

Compared to the older solutions, DDR4 modules are distinguished by its supply voltage of 1.2V, that makes it possible to reduce the running costs and energy by up to 40%. K-MEMORY DDR4 memory modules have been designed for the most demanding users who expect the highest performance and stability. New generation of memory includes both single and dual channel modules with frequency up to 3200 MHz.
